If you can read this, the chain works.

GitHub Actions made this page in the cloud; the Pico fetched it over your Wi-Fi and sent it to the printer. The same path works while your computer is off.

What this page tested

1	The Pico joined your Wi-Fi
2	It found the printer on the network by itself (no router settings)
3	It downloaded the job from GitHub
4	It streamed the file to the printer in small pieces (IPP)
5	It will not print the same job twice

Character test: café, naïve, Ærø, Łódź, Straße, ÀÉÎÕÜ
